

Mohammed Sinan

Full-Stack Developer

Number : (+964)7723424247, Email : mohammedbusiness1099@gmail.com

Github : github.com/mohammmedsinan, LinkedIn : linkedin.com/in/msinan1

Website : m-sinan.netlify.app

Summary : *Software Developer with 5+ years of full-stack experience in [Node.js](#) ecosystems. Delivered 10+ real-world projects, optimized a system performance by up to 63% and implemented scalable, enterprise serverless solutions using CI/CD pipelines and cloud architectures.*

Work Experience :

LocalEyesAi (localeyes.ai)

Full-Stack Developer

Canada (Remote)

Jun. 2026 - Present

- Sole backend engineer NestJS / TypeScript SaaS API for local SEO (GBP, ranking, billing, AI audits)
- Designed a **multi-tenant NestJS API** (organisation, business, location) with **JWT, RBAC, and IDOR** checks so tenants cannot access each other's data.
- Built **bidirectional Google Business Profile sync** (OAuth, inbound/outbound, field-mask merge) plus **profile-protection webhooks** for Google-suggested edits.
- Implemented **geo-grid rank tracking (multi-pin SERP, archives, weekly history)** and distance-weighted competitor scoring with change alerts.
- Shipped a **contract-driven AI audit pipeline**: preprocessors -> LLM passes -> JSON Schema validation -> N-factor group-weighted scores -> weekly tasks (LLM output treated as untrusted).
- **Integrated Stripe** (checkout, signed webhooks, idempotent events) with per-location plans and entitlements (keywords, competitors, seats).
- **Owned production jobs and deploy**: cron for GBP/rank/billing/AI, Docker, and CI to Digital Ocean.

KooraKings (koorakings.com)

Optimiza.ca (Full-Stack Developer)

Kitchener Canada (Remote)

Jun. 2021 - Present

- Built and scaled the **Node.js / Sails.js** backend for Koora Kings, supporting **80K+** users, **1K+** contests, and **2M+** predictions via **~180 REST APIs**.
- Implemented match prediction contests with join/invite flows, **confidence/risk scoring**, and SQL-backed **leaderboards handling millions of prediction records**.
- Developed an **FPL-style salary-cap fantasy system**: budget squads, transfers, free-transfer costing, auto-pick, and chips (**wildcard, free hit, triple captain, bench boost**).
- Integrated with an external provider feeds to sync **leagues, fixtures, live scores, and player stats into MySQL**, powering live scoring for active contests.
- Delivered admin **CMS APIs** for sports feed ops, sponsored contests, banners, and targeted notifications at **production scale**.
- Containerized the service with **Docker for staging/production** deployments.

Riyadh Season (Contract)

Optimiza.ca (Front-End Developer)

Kitchener Canada (Remote)

Jun. 2021 - Present

- Managed API operations for a **30-page web platform fully integrated** with an internally developed CMS.
- Re-engineered the legacy HTML, CSS, and JavaScript frontend API integration, **modernizing endpoint communication** and improving overall application **performance by 24%**.
- Implemented **server-side caching and lazy loading** to optimize API response handling, resource utilization, and page load performance.
- **Optimized and minified production bundles**, reducing deployment pipeline execution **time to 34 seconds**.

- **Designed and implemented a DTO** (Data Transfer Object) layer to standardize frontend–backend data contracts and simplify **integration of future features**.
 - **Authored comprehensive technical documentation** covering the project architecture, API integrations, development workflows, and implementation details.
-

Projects :

Dashboard Project :

- Technologies that were used in this project: (React, Less, Redux, AntD, Charts, Router, Axios)
 - Designed and implemented a dynamic routing and Redux state management system in React, eliminating the need for manually defining routes or models.
 - Built a scalable project architecture that serves as a reusable base for large, production-grade React applications
 - Integrated Redux Toolkit, React Router v6, and Redux Thunk to streamline state flow and route handling, improving maintainability and developer experience.
 - Implemented modular, reusable components with Ant Design and Chart.js for creating interactive dashboards and data visualizations
 - Configured a custom Webpack and Babel setup for optimized builds, efficient code splitting, and smooth development workflow.
-

Education :

University of Tikrit (*Bachelor's in Business Administration*)

Mar. 2022 - Aug. 2026

HackerRank (*Software Engineer*)

Mar. 2025

FreeCodeCamp (*JS / Algorithms and Data Structures*)

Mar. 2025

Technical Skills :

- **Front-End** : React, Next.js, Gatsby, JavaScript, TypeScript, HTML, CSS, Less, Sass, Tailwind, AntD, Bootstrap.
 - **Back-End** : Node.js, Nestjs, SailsJS, Express, GraphQL, Firebase, MongoDB, MySQL, MariaDB, superbase
 - **Tools** : Webpack, Vite, (TypeORM, Drizzle, Prisma and Waterline) , Babel, Git, Jest, CI/CD (Bitbucket, GitHub Actions)
 - **Other** : Python, AWS, GCP
